

Job Description: New College Grad - DevExtension

Clumio is a secure, backup as a service for the enterprise that eliminates the complexity of infrastructure management with authentic SaaS. Consolidate the protection of your Cloud with no hardware or software to size, configure, manage – or even buy at all. On your journey to the cloud, use the same service to protect workloads like VMware Cloud on AWS and native AWS services.

Roles and Responsibilities:

- Troubleshoot software components for a distributed object storage system in a service-based architecture.
- First level contact for the support team on production issues.
- Maintain and enhance highly performant scale-out data ingestion, data storage and retrieval and data processing pipelines using public cloud technologies.
- Implement benchmarking and tracing tools to analyze and fix scale and performance bottlenecks.
- Work on operational readiness and maintenance of these services
- Work together in a highly motivated team of engineers to fix production issues and also, implement new features and enhancements.

Skillset:

Golang, Java, C++ etc. (but not limited to these), public cloud technologies (AWS, Azure, GCP etc.), terraform, kubernetes
