

Forward Deployed Engineer - Intern

We are looking for a **Forward Deployed Engineer Intern** to be the technical face of our company. You will work directly with clients to turn their complex business challenges including AI driven workflows into working solutions using our platform.

Key Responsibilities

- **Problem Solve:** Turn complex customer challenges into functional, working solutions.
- **Build & Automate:** Develop integrations, workflows, and AI use cases like NLQ and automation.
- **Deploy:** Ship and troubleshoot tools directly in real-world client environments.
- **Customize:** Modify and adapt product features to fit specific client needs.
- **Bridge the Gap:** Act as the primary link between the customer and our internal engineering teams.

Core Skills Required

- Experience with APIs, system integrations, and data handling
- Ability to quickly understand new codebases and systems
- Experience with LLMs, RAG, or data pipelines
- Exposure to cloud / on-prem deployments
- Client-facing communication ability (this is non-negotiable)
- Experience in **solution engineering / pre-sales / consulting roles**
- Familiarity with **cloud platforms** (AWS, Azure)
- Exposure to **data pipelines, SQL, ETL workflows**
- Understanding of **product lifecycle and agile development**

Behavioral / Ownership Traits

- High ownership and bias for action
- Comfort working in ambiguity (requirements won't always be clear)
- Strong stakeholder management (both client & internal teams)
- Ability to balance speed vs scalability
- Commercial awareness — understands impact on revenue and retention
